Most recent update: 3/11/99

(Go to the resources page for a pdf printable copy of this.)

(note: as the financial prospectus say, past performance is not a guarantee of future results. This is not medical diagnosis, or recommendations of treatment. You should consult competent health care professionals and do your own research to understand what is happening. I believe all people herein have granted permission for their words to appear on Timmy's web page, but if your info is on here and for any reason want it removed, please let me know & I will do so.)

The information presented here is completely un-edited by myself or anyone else, except for the possible deletion of non-relevant or personal information, and is the viewpoint of the individuals who wrote it. They have not been solicited nor are they being paid for their opinions.

Not everyone has glowing results, and since I do not have a system of keeping track of all results of people using Timmy's tonic / and / or recipe, I cannot state percentages of results in any particular category. Probably less than half of the people give me any feedback other than re-orders, so these results may not be typical.

The final thought I was told after losing 4 little ones in the past 6 months, is that we can help give quality of life, give more months or years, but no one has invented immortality. 3 of the 4 who left went in their sleep, Spaz went as I held & was stroking him. I simply noted he stopped blinking. A friend who is sensitive to such things said he was just tired of being tired. He never recovered from the flu that hit 6 months before, and was hand fed all that time. He went thru multiple treatments of anti-biotics, etc. & left a mystery behind. More will be on a future "those gone but still remembered" page.

[More recent feedback is presented first, except when I have a couple from the same person, then it's in normal order of receipt.]

If you have stories you would like to share with others regarding Timmy's tonic recipe, feel free to send me them with the subject "testimonial" so I won't miss doing the right thing with it:) The positive feedback helps keep me going also!

Gary,

I don't know whether or not it's the PediaPred or the Timmy's or a combination of both, but my little Zep has done a 180! On Sunday night, after we returned from the SVFC show in Harrisburg, I let my little ones out to play. Zep was war-dancing, running, jumping, tumbling, racing through the tube, playing in the crinkle bag (NOT sleeping it it!), wrestling with his brothers, you name it! He was so full of life! I stood there watching him and I just started crying. I was so happy, I was in tears!! There's nothing like watching your sick little baby jump around all bright-eyed and bushy-tailed with that unmistakable look of ferret joy on his face! He played hard for a good 15/20 minutes and then still stayed awake and walked around exploring the room for another 20 minutes or so. Then, last night, he did the same thing! I couldn't be happier! So, if it is the Timmy's (which I have a feeling it is), it really is wonderful. Thank you thank you thank you thank you thank you!!!! And, thank you to Timmy also!!! You'll definitely be seeing more Timmy's tonic orders from me soon. And, I've been telling EVERYONE that has insulinoma or cancer problems to order some! If it worked for you and seems to be working for me, it has a good chance of working for many, many more! Thanks again! And, I'm sure all the fuzzies and fuzzy lovers of the world are thanking you too!

Jenni

Zep "Thank you! I feel great! Weeeeeeeeeee!"
Oso and Ozzy "We aren't sick, but can we have some too???"

Have a great trip, Gary! By the way, Zeppelin is doing AMAZING!!!!!! All this week, he's been the LAST one to go bed at playtime! My other two guys retreat back to their hammocks and he's still running around the room. It's unbelievable! I am so happy with his progress, I could wardance!

Thanks again!

Jenni :)

Zep "Cancer??!! What cancer? I feel great! Weeeeeeeeeeeeeee"
Oso and Ozzy "What's up with you? We've had enough. We're going to bed. Zzzzzzzzzz"

Sure...no problem! Zep is doing great. And, my other ferret, Ozzy (he doesn't have any cancer, as far as I know, but he was so skinny and ratty when I got him, it was heartbreaking) has been on the same duck soup as Zep (with the Timmy's added) and he is GORGEOUS now! He has a full, beautiful coat and has gained well over a pound! In fact....I have "proof" that he's gorgeous now. He just took first place in the chocolate ring at this weekend's AFA show in New Carrollton, MD! I was so happy, I actually cried...seriously! I felt like an idiot standing up there crying! But, winning that ribbon was so special because Ozzy has come so far and I am so proud of him! So, even though Ozzy wasn't necessarily sick, the duck soup with Timmy's helped him put on weight, get healthy and grow a gorgeous coat! Ozzy also won 6th place in the shelter category. Oso didn't do too well, though. He won 14th in sable and 13th in point...but that's because he blew his coat and v-mask (summer coat...yuk!) and he's not really a "true sable"...he has a pure pink nose and a mottled-colored back. So, maybe he'll do better in the fall when his winter coat grows in and he (hopefully) gets his v-mask back! Talk to you soon...

Jenni :)

Hi Sony and all...

been a while, i have been so busy trying to get house in order, and keep the kids well and all...just not enough hours in a day and the weekends---well if ya blink its Monday again.....anyways...so far so good...I do have lots and lots of mail to catch up on but the Timmy's Tonic and the Greens Plus seem to be helping both have more energy. Both are still eating real well (dried food--right now a mix of L'Avian and Totally Ferret as I am converting over to the Totally Ferret...I have really backed off of the cheerios cuz i read i believe in the Modern Ferret that too many are not good cuz of the fiber and cuz they make them retain water so they get just a couple now and again...Rudy stole a big grape last night --they love to help me unload the groceries ya know i wish i would of had my camera course it would of been a picture of 2 butts sticking out of a paper bag <grin>...i just keep loving them and giving extra kisses and loving care and play and praying...
thanx so much to all of you for keeping us in your thoughts..it sure does help to know people care. on to more reading...

Subject: Re: pkg

Hi Gary!

I did finally get the package! Thanks very much!

Max is doing better, but I am going to continue to give him Timmy's Tonic. I am so grateful! He is able to eat on his own and drink on his own (although I am still doing the supplemental feedings) and he can walk a little! He uses his litter box and seems to feel much better! He can not seem to put any weight on his back legs, but he is able to push himself to get around. I am so glad that he is doing better!

Thanks for your words of encouragement and for the great products!

Kathy

Subject: Apollo progress report

Hi!

Apollo has been on Timmy's tonic for a month. He is still doing very well. He plays, and follows me around like he used to, does his little wardances and chuckles and is eating regular food in addition to the baby food I mix with the Timmy's tonic. He is still taking prednisone every other day, although in the past week he has started throwing the syringe across the room! (It is an oral suspension) I have talked to his vet to report the progress after the first couple of weeks; it made her day. I am planning to take him for a check up in the next few days. I can still feel his lymph nodes, but just the way he acts makes me feel like there has been a lot of progress. I guess it would be ok to tell others what has happened at this point. I'll let you know what the doc says.

Thanks for your help,
Kathryn and Apollo

Dear Tiffany,

I'm just now catching up to the list. Please accept these belated condolences on the loss of Piggy. Ferret lovers know that the world is a poorer place with the loss of even one little fuzzie.

To Bobbi:

I too, have had a similar problem. My vet prescribed Amoxy/Pred. But, thanks to info gleaned from the list, I also started Slink on Timmy's Recipe. Slink appears to be back to his old self; It's been a month. I haven't returned to the vet yet and am still giving

him both the Pred and Timmy's Recipe. The vet's prognosis was worse than dismal. He either totally missed the diagnosis this time or Timmy's Recipe is a real miracle cure. It couldn't hurt to try it. Good luck to you and Holly.

P.S. To Gary, if your reading this, MANY THANKS for sharing Timmy's Recipe. I am sure it saved Slink, too.

. I have some data for your 'Timmys' file

Cat: abysinnian.. 12 yrs old age.. diagnosed with multiple tumors of various type all cancerous from breast to lymph.. on Timmys now for 4 months.. tumors are 1/4 previous size and all abnormal activity by internal organs has ceased.. as far as their vet is concerned the cat is in full remission and tumors continue to shrink... shrinkage accelerated on new formula within 1 week of receiving it and getting cat person on it.. Cats cataracts are thinning and cat has partial vision.. and renewed energy.. vets in local practice say cat now behaves like feline 1/2 her present age..

Dog: 9 yrs old.. previous bone tumors now all but vanished and lymph node involvement has ceased.. no new tumors found at last examination.. vets are now saying dog in full remission and tumors may be expected to eventually vanish to minute tissue involvement.. again.. reduction and remission accelerated when new timmys formula was introduced..

4 ferrets with lymphoma.. all in early teens.. all have had full remission of all symptoms and now are behaving years younger.. all four are altered males.. all four in same family since kits.. all four stricken in same year.. family is overjoyed as these kids belong to Grands and are their pride and joy.. all send their profound thanks to you for your wonderful 'Gods Medicine' you make for their kids.. they pay me 5 dollars a month for the two bottles of timmys for their kids.. so I will be covering out of my shelter funds and maybe let them keep paying later and maybe not.. they are very old and have little but their babies.. they sleep on the daybed in the living room so the little ones can have the only bedroom for nightie nite.. such sweet fuzzys and folks.. and so grateful.. they never fail to walk the four miles round trip to bring the five dollars..

and this one will kill you laughing... one cow.. yup I said cow.. one small family bovine pet with some sort of lymphatic condition.. was given a teaspoon of timmys [very small cow about 1/2 normal cow size for dairy cow] daily for two weeks then given a teaspoon in additional honey in water for another two weeks.. lymphatic swelling and discomfort gone and little cowlet is doing fine.. cow vet said looked like some sort of lymphatic cancer to him but didn't know how to test a cow for it.. neighbor to the ferret oldsters.. anyhow.. cow lives in their den with the pot bellied pig.. don't ask Gary.. just don't ask.. this is the boonies.. the country with the Hillbillies.. remember...I anyhow.. cow is now in tip top condition and cow vet thinks the 'stuff your fixin up for sick critters' is right good medicine' unquote.. I do not question HIM I just do the

critter fixing and go home.. but sheesh Gary a COW.. anyhow.. you can now add cow repair to the repertoire of Timmys conquests.. but if you ever tell anyone I let it get used to treat a cow I'll never speak to you again..

Questions? [just not about the darn cow] I just know I am never going to live this down.. fuzzy med saves cow.. I can see it now on the fml.. you do and I'll personally come to AZ and poison your raisins.. <ggg>

night.. loooong day today.. and no sleep for three days now.. I am beat.. any odds on me getting any rest tonight?? HA not likely..

hugs dayna and the wozzles

ps: I drew the line at the pot belly pig... so cheer up :)

Subject: Bubba & Templeton

Hi Gary,

I am extremely happy to report that Bubba is well on his way to recovery. Sunday he picked up his head around 9:00 p.m., Monday he fought his sub-q fluids, Tuesday he crawled around, Wednesday he showed he was very alert and began eating Pureed Totally Ferret on his own, Thursday he began cleaning himself, Friday he walked and this morning he ate solid, dry food and is getting better with walking - not that I have been keeping track of his progress :) We still have a ways to go, but we are out of the woods now.

Thank you for being available to us last weekend and for all of your advise. I truly believe that it is responsible for Bubba's progress.

I have a friend who has cfs, and she is currently looking for some herbal tonics etc. to take for it. I told her that I would chat with you since you have the same thing. You mentioned taking Timmy's Original Tonic for it I believe. How much would you take a day, week, etc. and does it help with the cfs? If you could get back to me about this I would appreciate it. And if you have any suggestions for things to take that would be wonderful too.

My guys fight over Timmy's tonic and Timmy's recipe. I mainly make it for Gizmo since his lymph nodes were and still are swollen. The swelling has gone down considerably though, and he is much more active these days. He can be in a deep sleep and awake in a matter of seconds if he smells Timmy's tonic or recipe. The boy loves it!

Have a wonderful day, and I hope that you and the furballs are doing fine.

Melanie

Subject: Apollo and Timmy's recipe

Hi Gary and Timmy and crew...

I have been giving Apollo Timmy's Tonic and some of the other ingredients for a few days now. I have had to improvise because I only have two ferrets and apparently, Apollo is a picky eater. However, his energy level has improved and he has even done a couple of war dances accompanied by chuckles and played with a couple of toys and chased my husband Gary. So, I consider that progress!! He (Apollo) even thinks that Kelse, the Springer is tolerable. I decided to taste what I was giving the little guy....Timmy's Tonic is great! When I add the other stuff it is ok....maybe I need to adjust things a little. Thanks for your help!

Kathryn

Apollo

Scamper

Kelse (ferrets are rather cute after you get to know them)

Gary...(the sceptic....hmmm, we'll see what happens....)

Hi, Gary!

Just a quick note on the results after having our three ferrets on your diet for the past two weeks. (We have one ferret, Molly, with an adrenal tumor who has lost 99% of her hair, and another, Nikki, who has a pancreatic tumor who "spaces" out occasionally. Our third, Katie, is healthy as a horse!)

I wasn't too hopeful that our ferrets would be eagerly lapping this stuff up after I mixed up the first batch. I know I wouldn't! Something about the smell and consistency of that baby food! For Molly, it was love at first bite. She doesn't even want her Cheerios anymore when we give them their treats when it's time to go to bed! She wants a big plate of the green stuff! Can't get enough of it. She doesn't seem so hyper anymore, and a sore on her side that wasn't healing seems to be finally going away. Also, her skin seems to be thicker than before, and she doesn't look so blue and unhealthy anymore. Plus, she seems to smell better (I mean, her odor is better. I have no idea if her olfactory senses have improved!). Her hair isn't coming back, yet, but I just got your letter about the pine bark extract, so I'll give that a go. Poor ferret, I wouldn't be surprised if she turned green from all the herbs we're feeding her!

Nikki has not quite taken a liking to this stuff like Molly has, so we had to resort to the forced feeding tactic! I felt pretty sorry for her, watching Treena pump the green goo down her gullet with our turkey baster while I held her mouth open. She seems to have resigned herself to the fact that it's going to go in, will-ye or nill-ye, and will now swallow it without having to have her jaws pried open. She still tries to run and hide, though, when she sees me getting the ingredients out of the fridge! About the only effects that we've noticed with her so far is that she doesn't space out after we've fed her (for awhile), her energy level's up, and her coat is getting a lot nicer. Well, can't expect miracles in two weeks. Katie seems to like it, and we give her a small portion as a maintenance/preventative. She's such a pig that I'm sure that she would eat the whole bowl if we gave her the chance. I think that the reason for her good health is that she's always had a steady diet of herbs in the form of our houseplants! We've got some funky tropical specimens in our house, so maybe somebody would like to investigate the beneficial compounds available in these!

Thanks again for the info. I appreciate being kept up-to-date. Oh, yeah, if you could send us another couple bottles of Timmy's Total Tonic and bill us back on e-mail, I will get a check right out to you.

Thanks!

Gig and Treena

Subject: Update and order/testimonial

Gary,

Just a quick update on how my ferrets are doing on Timmy's formula. The ECE victim is seems to be making a good turn around. He is eating well on his own , but I'm still feeding him twice aday w/ Timmy's green goop as we call it here.

My 4 year old adrenal ferret is doing well on Timmy's goop. I would go as far as to say she is playfull , but she is much more full of energy. She runs around the house getting into things and making general trouble. Her old pattern was to go back to bed after about 10 minutes.

I would like to order 2bottles of Timmy's formula and one of the greens.

Thanks,

Rich Christman
